

BRAND GUIDELINES

THE MARK

LEAD AND LANES

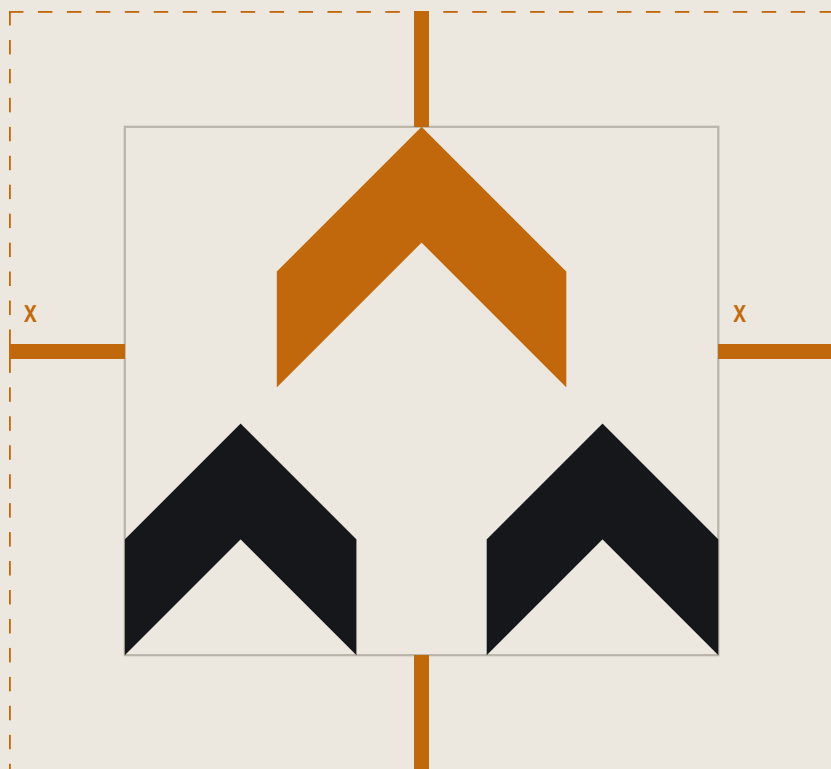

The amber chevron is the lead: the coordinator that talks to the user, assigns scope and reviews work. The two chevrons behind it are lanes: long-lived, linked sessions moving in formation.

CONSTRUCTION

One 45° angle, one stroke thickness, flat vertical terminals. The lead is 1.25× the width of a lane. Each lane's outer edge sits on the extension of the lead's inner edge, so the fleet reads as one arrow.

Never redraw the mark. Use the supplied files.

CLEAR SPACE & SIZE

CLEAR SPACE

X = the chevron stroke (22% of the mark's height). Keep at least 1X clear on every side of the mark and of both lockups.

MINIMUM SIZE

Mark: 24 px tall on screen, 8 mm in print. Horizontal lockup: 24 px tall. Below 24 px, use the micro icon: the lead chevron alone on an ink square.

COLOR VERSIONS

Use the full-color mark wherever you can. On dark backgrounds the lead is Amber; on light backgrounds it switches to Amber Deep. Use the one-color versions for single-ink print, embossing and photography.

Labels, meta

Ratio: roughly 70% Ink, 20% Paper and Graphite, 10% Amber. Amber is a signal color: it marks the lead and the active element, never a background wash. Amber Deep keeps at least 3:1 contrast on Paper for graphics. Set body text in Ink or Graphite, never Amber.

COORDINATOR ASSIGNS SCOPE

TEXT & UI • JETBRAINS MONO MEDIUM

The lead coordinator talks to you, splits the work into lanes, reviews what comes back and passes results between sessions.

LABEL • JETBRAINS MONO BOLD • UPPERCASE • +140

LANE-02 • REVIEW • 3 OPEN

Two typefaces, both free under the SIL Open Font License; the files are in /fonts. The wordmark is custom lettering: its V is redrawn with a pointed apex. Always use the logo files, never type “CONVOY” in Barlow.

ICON & FAVICON

SQUARE, NO ROUNDING

The icon is the full-color mark on Ink, 62% of the tile's width and nudged up 2.5% so it looks centered. Ship the corners square: platforms that mask icons (iOS, Android) apply their own shape.

MICRO

At 16 px, use `favicon.svg / favicon-16`: the lead chevron alone. At 32 px and up, use the full mark. `favicon.ico` contains 16, 32 and 48.
